

Resilient Design Institute

COMMUNITY, INFRASTRUCTURE, FOOD, ENERGY

STATEWIDE

Project Description

A new organization seeks to build the capacity of Vermont communities and residents.

Alex Wilson, founder of Green Building Magazine and a member of the Dummerston Energy Committee, saw firsthand what happens when buildings aren't well built and well-insulated. After seeing the devastation to homes caused by Tropical Storm Irene, he decided to jumpstart an idea he'd been chewing over – starting a Resilient Design Institute.

The Institute, a new nonprofit based in Brattleboro, looks to educate the public about resilience and provide practical on-the-ground solutions for what it really means when it comes to building design, agriculture, and economic systems. They plan to provide workshops, resources, and consulting to communities, businesses and homeowners.
